

Test your system on WebEx Meetings/Events if you haven't used it before

Prepared by Wei Shen, March 12, 2021

1. **Best practice is to download the desktop “Cisco WebEx Meetings” application in advance and use that instead of the browser. This takes about 3 minutes and then you will never have to worry about the WebEx connection again.**
2. Smartphones & Tablets (based on iOS or Android) users require the app. It is free and can be downloaded and installed very quickly. You could use it for your personal small meetings. We suggest you use desktop for this training course for better quality and outcome.
3. If you have to use a browser, Internet Explorer should not be used (it is an old JAVA script browser and does not support many of the web-based tools of today). Use Chrome if you have to use a browser (**use of a browser is discouraged by us!**).

We do not have guideline for participants – its tough when the participants computers are all setup differently and they are all using different browsers. However I would **recommend you test your systems ahead of time on WebEx Meeting/Events** by clicking the link here (or right click the link and copy/paste the hyperlink into your google browser): [Cisco Webex | Test online meeting](#). If successful, you would get to the following screen. Then you could enter the test clicking “join meeting”.
